Introduction:

- Inventory Management System (IMS) refers to a software application or a set of processes that facilitate the efficient monitoring, tracking, and control of a company's inventory.
- It involves the management of stock goods, materials, or products that are either ready for sale or are in the production process.
- The primary objective of an IMS is to ensure that the right amount of inventory is available at the right time, minimizing the costs associated with excess inventory while preventing stockouts

TASK	ASSIGNED TO	PROGRESS	START	END
Initiation				
Set up Team	Maniram Tanneti	100%	8/30/23	9/2/23
Conduct studies	Sai Satyanarayana Ta	100%	9/2/23	9/12/23
System Request	Dharani Thallapally	100%	9/12/23	9/21/23
Define goals	Sai Satyanarayana Ta	100%	9/21/23	9/28/23
Planning and design				
Create schedule	Maniram Tanneti	60%	9/29/23	10/3/23
Identify deliverables	Dharani Thallapally	80%	10/1/23	10/6/23
Docuemnt Requirements	Maniram Tanneti	100%	10/6/23	10/10/23
Define scope	Sai Satyanarayana Ta	100%	10/6/23	10/11/23
Identify risks	Dharani Thallapally	40%	10/11/23	10/16/23
Execution				
Execute tasks	Sai Satyanarayana Ta	10%	10/16/23	11/10/23
Monitor progress	Dharani Thallapally		10/16/23	11/10/23
Provide updates	Maniram Tanneti		10/16/23	11/10/23
Testing and validation	Dharani Thallapally	25%	10/16/23	11/10/23
Documentation				
Documentation	Maniram Tanneti	25%	10/6/23	11/15/23

Tasks Completed

1

Developed use case diagrams, activity diagrams for the scope

2

Formed the functional and non-functional requirements for the scope.

3

Documented the requirements.

4

Finalized the technology that needs to be adopted for implementation, python and flask framework.

TEAM GDMS

6

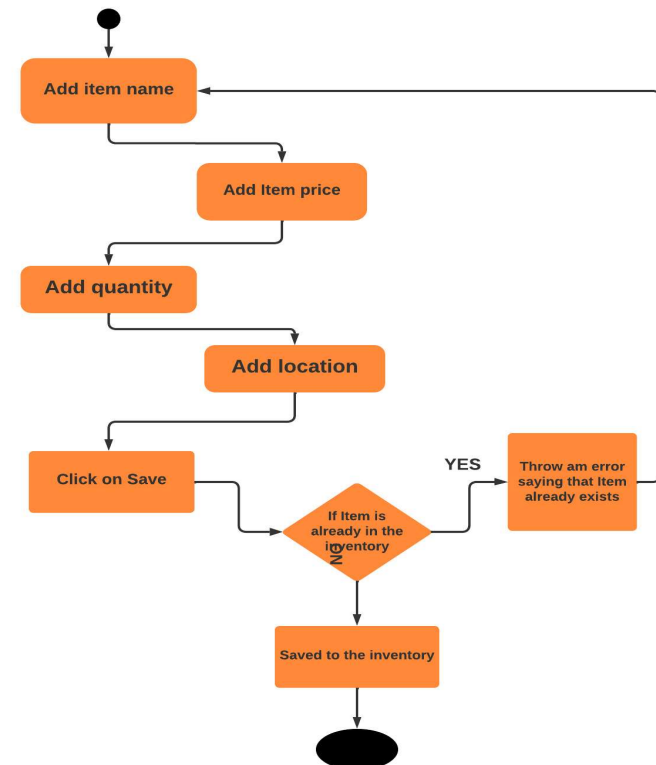

Use Case Diagram

Activity Diagrams

Adding an Item to the Inventory-Role WareHouse Manager

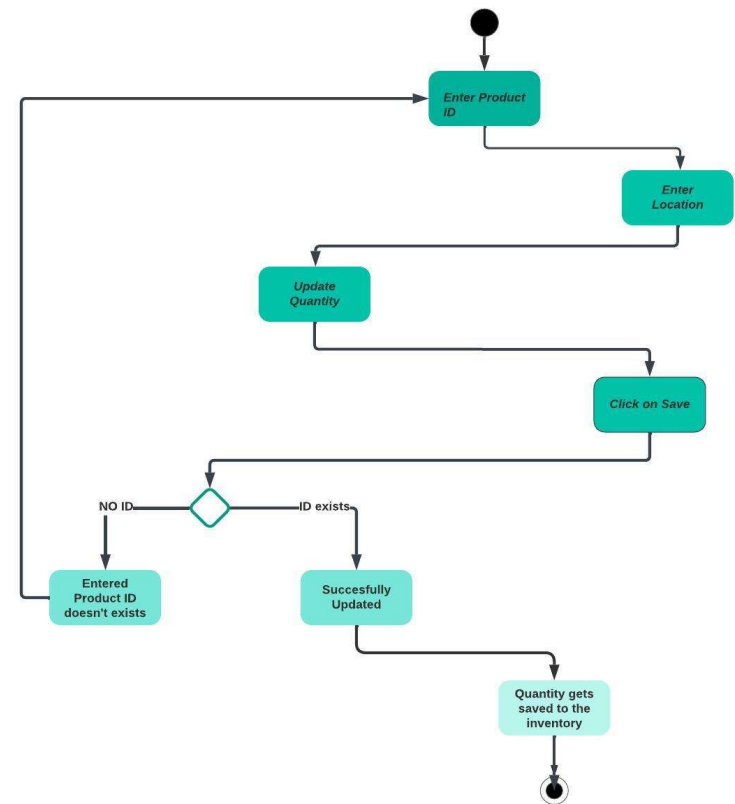

10/18/2023

Activity Diagrams

Updating the Item quantity In the inventory- Role Warehouse Manager

TEAM GDMS

What's next?

Implementation of
the software
system.

By using Python,
develop the
features of the IMS
that are mentioned
in the scope
considering all the
requirements.

Incorporate all
possible error
messages when a
user tries to give
inaccurate input.

Test the developed
system by giving all
the possible inputs.

Documentation,
Reporting
